NOTE: The self-sufficiency standard for each locality was last calculated by the Virginia Department of Social Services in 2006. In order to obtain a figure for Virginia LWIA#16, the standard for each locality was weighted by its percentage of the total population using 2011 Census data. These figures were further refined by inflating them to 2012 price levels using the Consumer Price Index (CPI) for urban consumers in the South. The above Family Income Levels will be periodically reviewed and revised as appropriate.
